Care. Comfort. Support. That's Life at Wingate.

The residents in the *FERRACE* are provided with programs and activities that are challenging and individualized to residents in earlier stages of cognitive decline. Typical residents in The *FERRACE* may require cueing and supervision, as well as a structured environment to maximize success. Most persons with early stages of memory loss or mild cognitive impairment function well in everyday activities, and are usually worried and aware of their cognitive changes.

The *FERRACE* provides world-class programming and experiences to care for the whole person while focusing on safety and peace of mind. Wingate Healthcare recognizes the need for a distinct level of care for early and later stage cognitive decline. By providing two unique programs, the residents will benefit most from our **individualized care, designated caregivers and programming.**

Our specialized, trained caregivers and life enrichment associates provide residents with a safe and stimulating environment to maximize and focus on their abilities. The *FERRACE* offers a secure setting with life enriching activities including Wingate Healthcare's signature programs. We call it the **3 W's**:

WINGATE WISDOM

WINGATE WELLNESS &

WINGATE WARMTH

Wingate's signature memory care program is focused on a holistic approach to caring for the whole person. Wingate Wisdom, Wellness and Warmth provide each resident with purposeful activities for intellectual stimulation, movement and spirituality. The cornerstone of the **3 W's** is to enhance engagement and self-confidence, while maximizing functional abilities and preservation of cognitive functions to the extent available.
